DETAILED ACTION

Claims 1-4, 7-21 and 38 have been canceled.

New claim 45 has been added.

Claims 5, 6, 22-37 and 39-45 are currently pending.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 21, 2008 has been entered.

Election/Restrictions

1. **Claims 5, 6 and 22-24 stand withdrawn from further consideration** pursuant to 37 CFR 1.142(b), as being drawn to a non-elected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on November 16, 2006. Please note that claim 22 is also withdrawn because it does not read upon the binding molecule of the elected invention.

Accordingly, **claims 25-37 and 39-45 are the subject of examination** in the present Office Action.

2. In view of Applicant's amendment, no outstanding grounds of rejection are maintained.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 1644

3. Claims 25-37 and 39-45 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This is a NEW MATTER rejection.

Applicant has amended base claims 25, 33 and 40 to recite “wherein administration of the antibody does not decrease factor B levels in the blood” in an attempt to differentiate the claimed invention from the prior art of record. Applicant asserts that the recitation by examples 2-6 of the instant specification and that the exemplified antibodies do not affect the amount of factor B in the blood and sera. Applicant asserts that factor B was not decreased by the addition of anti-factor B antibody in any of the examples and that this supports the recitation in the claims.

Applicant’s position is not convincing. First of all, the cited examples are all in vitro assays which do not include all the elements for the removal of immune complexes found in an in vivo environment, as is claimed. Second, there is no indication in any of the assays that reduction of factor B as a result of the addition of anti-factor B antibody was measured, considered or even pertinent to the assay.

There is no support in the cited in vitro assays for the recitation of “wherein administration of the antibody does not decrease factor B levels in the blood” in the claimed therapeutic in vivo method. The recitation therefore constitutes new matter as it does not have written descriptive support in the specification or claims as originally filed.

Conclusion

4. No claim is allowed.
